

**FALLACIES OF
THE ATHEISTS !**

**WHO IS THE
ARCHITECT OF
THIS UNIVERSE ?**

ABU HAYYAN SAEED

Fallacies of the Atheists !

Who is the Architect of this Universe ?

Abu Hayyan Saeed

We heard from scientists so many times since decades that , The Sun has been moving steadily through space on its axis at a speed of about 6840 km per hour for the past 5 billion years. Along with this, its family, 9 planets, 146 moons and more than 100 thousand meteorites are moving as well. It has never happened that someone went to the chase by mistake or something happened by mistake. All are going their own way according to their own agenda.

There are designs, but not a designer, there is a law, but not an enforcer of the law, there is a control system, but not a controller.. What will you say?

Twice a day, the moon stirs the trillions of tons of ocean water three hundred and seventy thousand miles away from the islands to provide just the right amount of air for the creatures that inhabit them. Oxygen is being administered, the water is becoming clearer. No bad smell is not born in this process. The coastal areas are being cleaned and the wastes are washed into the deep water and become food for the creatures living there.

For at least three billion years, a suitable balance has been maintained so that large and small aquatic animals can easily swim in it and dispose of their bodies after death. They do not have freshwater or brackish water. There are also many. There are also freshwater oceans below the surface that are mixed with

open freshwater oceans. There is a curtain between them all so that fresh water remains fresh and salt water remains fresh. What is the logic behind this surprising system? Who maintains this balance?

Was it the water's own thought or the moon's own decision?
Who cares for the baby in the mother's womb?

Who motivates the mother to save the child in the face of every danger?

Chickens start walking when they just come out of the egg, animals cling to the mother's side for milk without learning. Who in the animal world loves to put food in their beaks and into their children's mouths?

Where did they learn these manners of life?

Honey is extracted from each flower in the far drawer garden with utmost sincerity and collected in the hive. One of them, like an expert scientist, knows that some flowers are poisonous, they don't go near them. As a competent engineer they also know the art of separating honey and wax. When it is hot, in order to prevent the honey from melting and running away, they also cool it by running their fins like a fan. In each of them there is such a spiritual system that they go far but do not forget their way home. Who taught them this way of life?
Who gave them this intellect ?

The Spider makes such a web for catching prey with its mouth that even modern textile engineers are unable to make such a fine weave.

House ants collect food for the winter in summer, build houses for their young offspring, lives in an organization where all management principles are surprisingly corporate.

Fish living in cold water lay their eggs thousands of miles away from their home in warm water, but the hatchlings go to live in their own home in Cold Waters traveling thousands of miles.

The life cycle of plants is no less fascinating. How do germs and bacteria manage to survive?

Who taught them about life?

Who taught them these principles of social management?

Is the earth so intelligent?

It also automatically established the system of day and night, automatically tilted on its axis -67 1/2 degrees so that the seasons change throughout the year, sometimes spring, sometimes summer, sometimes winter and sometimes autumn. All Residents have access to all kinds of vegetables, fruits and food throughout the year.

Did the earth itself establish a strong north-south magnetic system within itself?

Due to this effect, the electricity in the clouds turns the nitrogen in the air into Nitrous Oxide and prepares natural fertilizers for the plants on the land through rain and the planes in the air find their way with the help of this magnetism, the deadly rays from the solar system collide with this magnetism and are turned back so that the terrestrial creatures Protected from deadly effects and life goes on

The earth, the sun, the air and the ocean have arranged together with the ocean so that the heat of the sun gives rise to water vapor, and the air lifts up tons of water. And brought to the field,

the radio particles from the stars. Collect the water in the wind and form a funnel and then use the rain to irrigate the dry field by making the water soft.

When water is scarce in winter, it accumulates in the form of snow deposits on the mountains. In summer, when more water is needed, it melts and flows back to the sea in the form of rivers, irrigating the plains.

A perfectly balanced system that irrigates everything and nothing goes to waste.

Did you think about the relationship between the star, air and the earth?

In the human body, our Pancreas does not allow a certain amount of sugar in the blood to rise, the pump of the heart continues to pump blood with a regular movement of 80 times every minute without repair in a 75-year-old life. It is difficult.

Our kidneys are a unique and wonderful factory of cleaning that knows how to keep what is useful for the body in the blood and throw out the waste.

Gastrointestinal system induces multiple amazing chemical complexes that separates life-giving components from food such as proteins, carbohydrates, etc.

This masterpiece of engineering in the human body, this unique specimen of science, these small amazing factories in the human body, did they all become in one day?

Who made the brain and intellect ? Encased in a hard shell of a hard disk, it floats in water as a treasure of intelligence, a store of information, a center of commands, a source of communication between man and his environment.

Every human being is a collection of cells. So small they don't come without the aid of a microscope, but they all know what to do. Every cell of a human being has consciousness and is a complete personality in its own existence. Our entire programming is written in these genes and life moves automatically according to this program. The whole plan of our life, our personality, our intelligence, our purpose has already been written on these cells.

Who programmed this?

Animals or plants, their entire blueprint is enclosed within their seeds, whose blueprint is it?

A cell, which is difficult to see even with a microscope, becomes a strong, intelligent human being.

Whose creation is this?

Now we come to the wisdom of the atheists:

New version of the Big Bang theory :

There was an explosion, the wheat seeds spread over the already prepared field. Then the plants came out, pesticides sprinkled automatically then the wheat crop was ready, it was harvested by itself, then the wheat was cleaned and filled into sacks, then the wheat sacks were loaded in trucks by themselves, then the trucks moved by itself and the sacks of wheat were unloaded in the market, then it reached people's houses, there the wheat was crushed by itself and became flour, then bread was prepared from the flour. And the mouths of the people started to become mouth watering. Similarly the curry was also prepared. The vegetable flew from the field and reached the cooking pot, then spices, ghee

and salt were added to it and the curry was prepared, as well as in an another scene a cow slaughtered herself into beef slices and beef slices traveled automatically into a cooking pot before the process of stew making.what the wonderful ideas of mine ..!
This is the atheist's new version of the Big Bang theory
